DETAILED ACTION

Claims 1-7 are pending.

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-6, drawn to a micromixing method and a method of producing oligomer or polymer, classified in class 252, subclass 1 and various other classes and subclasses depending upon the product chosen for the micromixing.
- II. Claim 7, drawn to micromixing method to produce oligomer- 2,4,6 – triphenyl-1,3,5-triazine, classified in class 544, subclass 193.

If invention I is elected applicants should also elect a specific product so that the Application can be properly classified and assigned to an examiner for examination.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the process as claimed can be used to make other and materially different product as seen in instant claims 1-6 and as well as in the prior art Pirkel et al., US 5,616,818. In addition, the product as claimed can be made by another and materially different process as seen in Norell US 3,932,402.

Art Unit: 1624

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Claims 1-6 are generic to a plurality of disclosed patentably distinct species comprising any chemical reactant including those monomers for making oligomers and polymers. Applicant is required under 35 U.S.C. 121 to elect a single disclosed species, even though this requirement is traversed.

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

In view of distinct nature of each invention, the restriction is set forth in writing.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Any inquiry concerning this communication from the examiner should be addressed to Venkataraman Balasubramanian (Bala) whose telephone number is (703) 305-1674. The examiner can normally be reached on Monday through Thursday from 8.00 AM to 6.00 PM. The Supervisory Patent Examiner (SPE) of the art unit 1624 is Mukund Shah whose telephone number is (703) 308-4716.
